HelixCore

PERFORCE

The World's Most Scalable Version Control

Perforce Helix Core is the version control platform trusted by 19 of the top 20 AAA game studios, award-winning VFX houses, and the largest semiconductor firms. It tracks and manages changes to massive volumes of data — from source code to binary to IPs — with unrivaled performance, security, and scalability. Give your global team the power and sophistication to collaborate more efficiently and accelerate development.

Scale Tools and Teams Without Limits

Helix Core handles massive volumes and sizes of files without ever sacrificing performance. Scale across the tools and roles of your globally distributed team with a platform that supports:

- 10s of thousands of users
- 10s of millions of daily transactions
- Petabytes of data — including large graphics and other creative assets
- Multi-site (i.e., global) topologies

Protect Your Most Valuable Assets

Helix Core makes it easy to protect and reuse your most valuable digital assets with the following features:

- Access control down to the file level and by IP address
- Full audit history to support traceability
- End-to-end encryption
- Authentication with your preferred Identity Provider via OpenID Connect or SAML 2.0

Gain New and Efficient Models For Work

With Helix Core, your team will gain a central system for best-in-class development, thanks to enterprise features like:

- Advanced branching models with built-in visualization (via Streams)
- Exclusive file locking with global lock visibility
- Secure mechanism to distribute content to 3rd parties
- Virtual File Sync
- S3 (and S3-compatible) Object Storage Support

Version Within Your Tools and Processes

Helix Core offers out-of-the-box integrations with industry-standard tools, including:

- Game and real-time 3D engines: Unreal and Unity
- Graphical tools: Photoshop, 3ds Max, Maya
- Project management: Jira, Helix ALM
- IDEs: IntelliJ IDEA, Visual Studio
- CI/CDs: Jenkins, TeamCity

Plus, with APIs, Helix Core can be extended to work with any other tool your team is using.

Deploy Your Way

Helix Core can be deployed on-premises, in your cloud of choice, or via a combination of cloud and on-premises. Deployment options include:
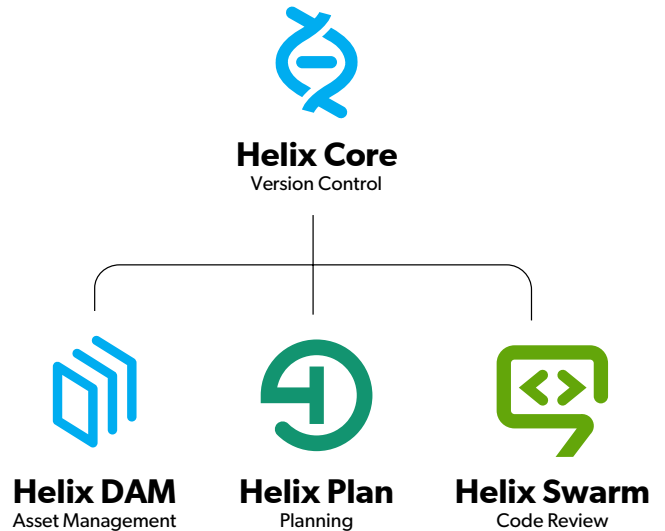

- Helix Core (On-Premises): An ideal solution for organizations that require an on-premises or hybrid solution for security and compliance.
- Helix Core Cloud: A turnkey, instant deployment of Helix Core that is fully managed and hosted by Perforce. Designed for teams under 50, and available at $39 / user / month.
- Helix Core Images for Cloud: We have several options for those who want to manage and maintain their own cloud server on AWS, Microsoft Azure, Google Cloud, or Digital Ocean.
- Helix Remote Administration: Let our experts administer and maintain your Helix Core server for you, whether on-premises or in the cloud. Our Helix Remote Administration package can be added to any of our Helix Core offerings and includes world-class support that lets you focus on your development.
